

## About the EDUKIDO Program

EDUKIDO is an activity program through which children learn about the world around them by assembling LEGO® bricks. We offer over 200 scenarios that cover various topics from STEM, history, nature, society, and more. At Edukido, we value knowledge, provide engaging content, teach new skills, and encourage critical thinking. Our primary focus is on the fun and joy that arise from this process. Classes are held in consistent groups of up to a maximum of 10 children, organized according to the participants' ages. In the Edukido program, learning becomes a fascinating adventure, further motivating them. Children solve tasks, learn practical skills, all while enjoying the best learning condition - fun!

How do we learn while playing with LEGO® bricks? LEGO® bricks introduce young explorers to the world of technology and nature. Through them, children learn the basics of construction, motor operation, natural laws, and mathematical rules. Our goal is to convey knowledge through practice and experience. All of this creates a solid foundation for acquiring advanced knowledge in the future. In our classes, we "bring to life" models made of LEGO® bricks by adding motors and our own solutions. We always encourage children to ask questions, and we seek answers through practice and experiments. This is the best way for them to better understand the world.

You can enroll in our regular program throughout the school year, and we conduct it once a week for 1 hour at various locations in Split and the surrounding areas for children aged 3-12. Contact us for a FREE trial class at any time during the year. In addition to the regular program, we organize LEGO® themed birthdays. Once a month, we host an EDUKIDO evening where, along with a workshop, we order pizza and watch one of the LEGO® animated movies. We also organize EDUKIDO camps during the summer and winter holidays. Contact us to find out when the next one will be. We also offer one-time workshops throughout the year in kindergartens and schools, as well as for special occasions like carnivals and Easter.

**DIOCLECIAN'S PALACE:** The crown jewel of our program and a workshop we are truly proud of. This workshop is designed for groups of 6 to 30 children, with the possibility of participation for entire families and groups of up to 30 children/adults. Through this special workshop, both children and adults learn about the history of Diocletian's Palace in a program that lasts for an hour and a half. It's well-known that children learn best through play and experience. By building the palace, they not only learn about it but also take ownership of it, recognizing the parts they've assembled and taking pride in their creation. Arrange to hold the workshop at your location or ours, or simply join in the pre-scheduled sessions by signing up at: [split@edukido.hr](mailto:split@edukido.hr)

**PROGRAM AT MARKO MARULIĆ CITY LIBRARY:** We conduct our regular classes on Saturdays from 11:00 AM to 12:00 PM at the Marko Marulić City Library, as well as occasional one-time workshops.

**CLASSROOM AT THE YOUTH CENTER (MKC):** In the MKC classroom, we conduct all of our multi-hour programs and regular classes. The classroom is a newly renovated space of 200m<sup>2</sup> equipped with sound systems, a projector, and a tea kitchen. It's ideal for the youngest ones, as well as for birthdays and mini-camps.
